December 30, 2020

Dear Resident and Family Members,

By now you have probably learned that the COVID-19 vaccines have been granted Emergency Use Authorization and are ready for distribution to the healthcare workers and residents in long term care. We have long awaited this exciting news.

We understand that some of you may be concerned about the safety of these new vaccines, as they have been developed and tested far more quickly than those in the past. We want to assure you that the speed with which these vaccines were developed is not due to skipping important safety steps, but rather the result of focused, collaborative work performed by experts across the globe. Vaccines approved for Emergency Use by the U.S. Food and Drug Administration have undergone the same level of rigorous testing for safety and efficacy as other vaccines and have been tested in tens of thousands of people, including older adults. Two independent advisory committees of experts from academic institutions also monitor vaccines to ensure their safety.

Currently available COVID-19 vaccines require two separate doses given about three to four weeks apart. Participants of clinical trials have reported experiencing short-term side effects after being vaccinated, with more pronounced discomfort after the second dose. These possible side effects include headache, muscle pains, fatigue, chills, fever, and pain at the injection site. Sometimes there is misunderstanding about the cause of these reactions, as you may have heard someone say a vaccine has "made them sick" or given them the disease that the vaccine was intended to prevent. We want to be clear that this is not the case. The COVID-19 vaccine cannot give you a COVID-19 infection or make your COVID test positive. The vaccine works by helping the body create antibodies to fight off the virus. Feeling discomfort after getting the vaccine means that the vaccine is doing its job and your body is making antibodies. Patients that have already had COVID-19 should still receive vaccination, once they have recovered.

We, along with thousands of other long-term care facilities, are participating in a program with the Centers for Disease Control to help us most efficiently distribute these vaccines to our residents free of charge. We will keep you informed of this process as we move forward. Our staff will also have the opportunity to get vaccinated through this program.

As we have been saying over the course of this difficult year, we are all in this together. Please know that the safety and wellbeing of our staff and residents have been and remain our top priority. We are confident that the worldwide, unprecedented scientific achievement of these COVID-19 vaccines will eventually enable us to enjoy life with our loved ones again.

I encourage you to reach out to me if you have any questions about the COVID-19 vaccine, its' possible side effects, and what to expect after you or a loved one receives it.

Sincerely,

Dr. Alok Saxena
Medical Director
